# Source Zone Treatment Using Injection of ZVI into a Fractured Rock Aquifer

John Liskowitz  
ARS Technologies Inc.

# Overview - Ferox<sup>SM</sup> Process (ZVI Injection)

## Ferox<sup>SM</sup> Process

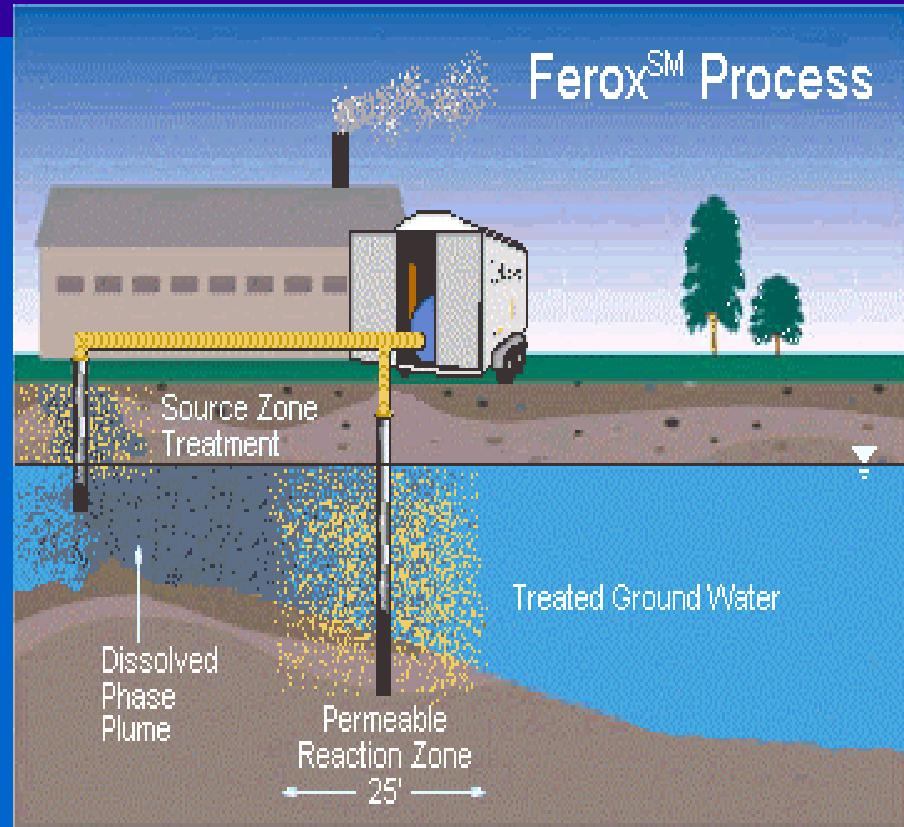

U.S. Patent # 5975798 November  
1999:

*Applied to address source  
contamination*

*Injections possible underneath  
existing structures/utilities*

*Not limited by depth of  
application*

*Iron powder injected to Mirror  
Contamination Heterogeneity*

# Hydraulic vs. Liquid Atomized Injection

Hydraulic Pumping

Liquid Atomization

# Reactive Sponge Iron Powder

- High Surface Area
- **FDA Certified 95+%**  
Pure
- Trace Carbon  
Elements Enhance  
Reactivity
- 40-70 um size  
particles

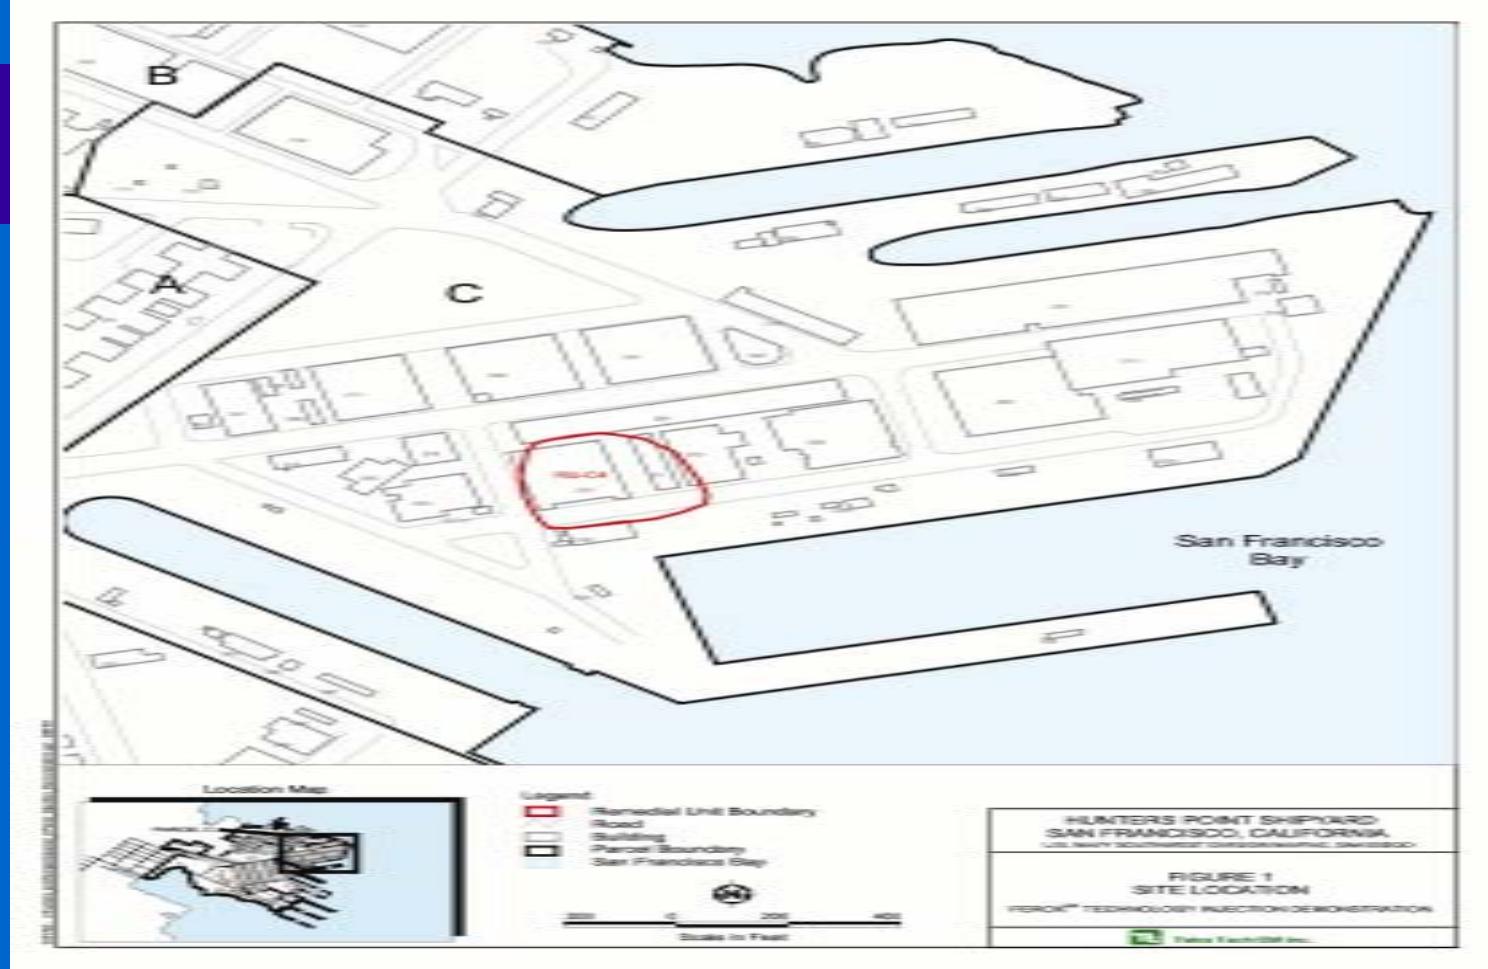

# Hunters Point Brownfield Site

- Established in 1869 as the first dry dock on the Pacific Coast
- Navy operated facility from 1940 until 1976. Site activities included ship building, maintenance and submarine servicing and testing.
- In 1991, DOD listed the Shipyard for Closure.
- Navy investigations have identified 6 parcels A through F for treatment

# Hunters Point Brownfield Site

- The Site has spectacular views of downtown San Francisco and is well situated between the airport, 3-com park and mission bay
- A 25-year development Plan estimated at \$5 billion dollars is favored by the city of San Francisco to revitalize the blighted southeastern section of the city
- Once each parcel is remediated, it is estimated that developers will create a 500-acre planned waterfront community made up of residential, commercial, mixed-use, retail and light industrial uses.

Naval Facilities Engineering Service Center  
Naval Facilities Engineering Command – Southwest Division

## Outside Building 272 - Parcel C

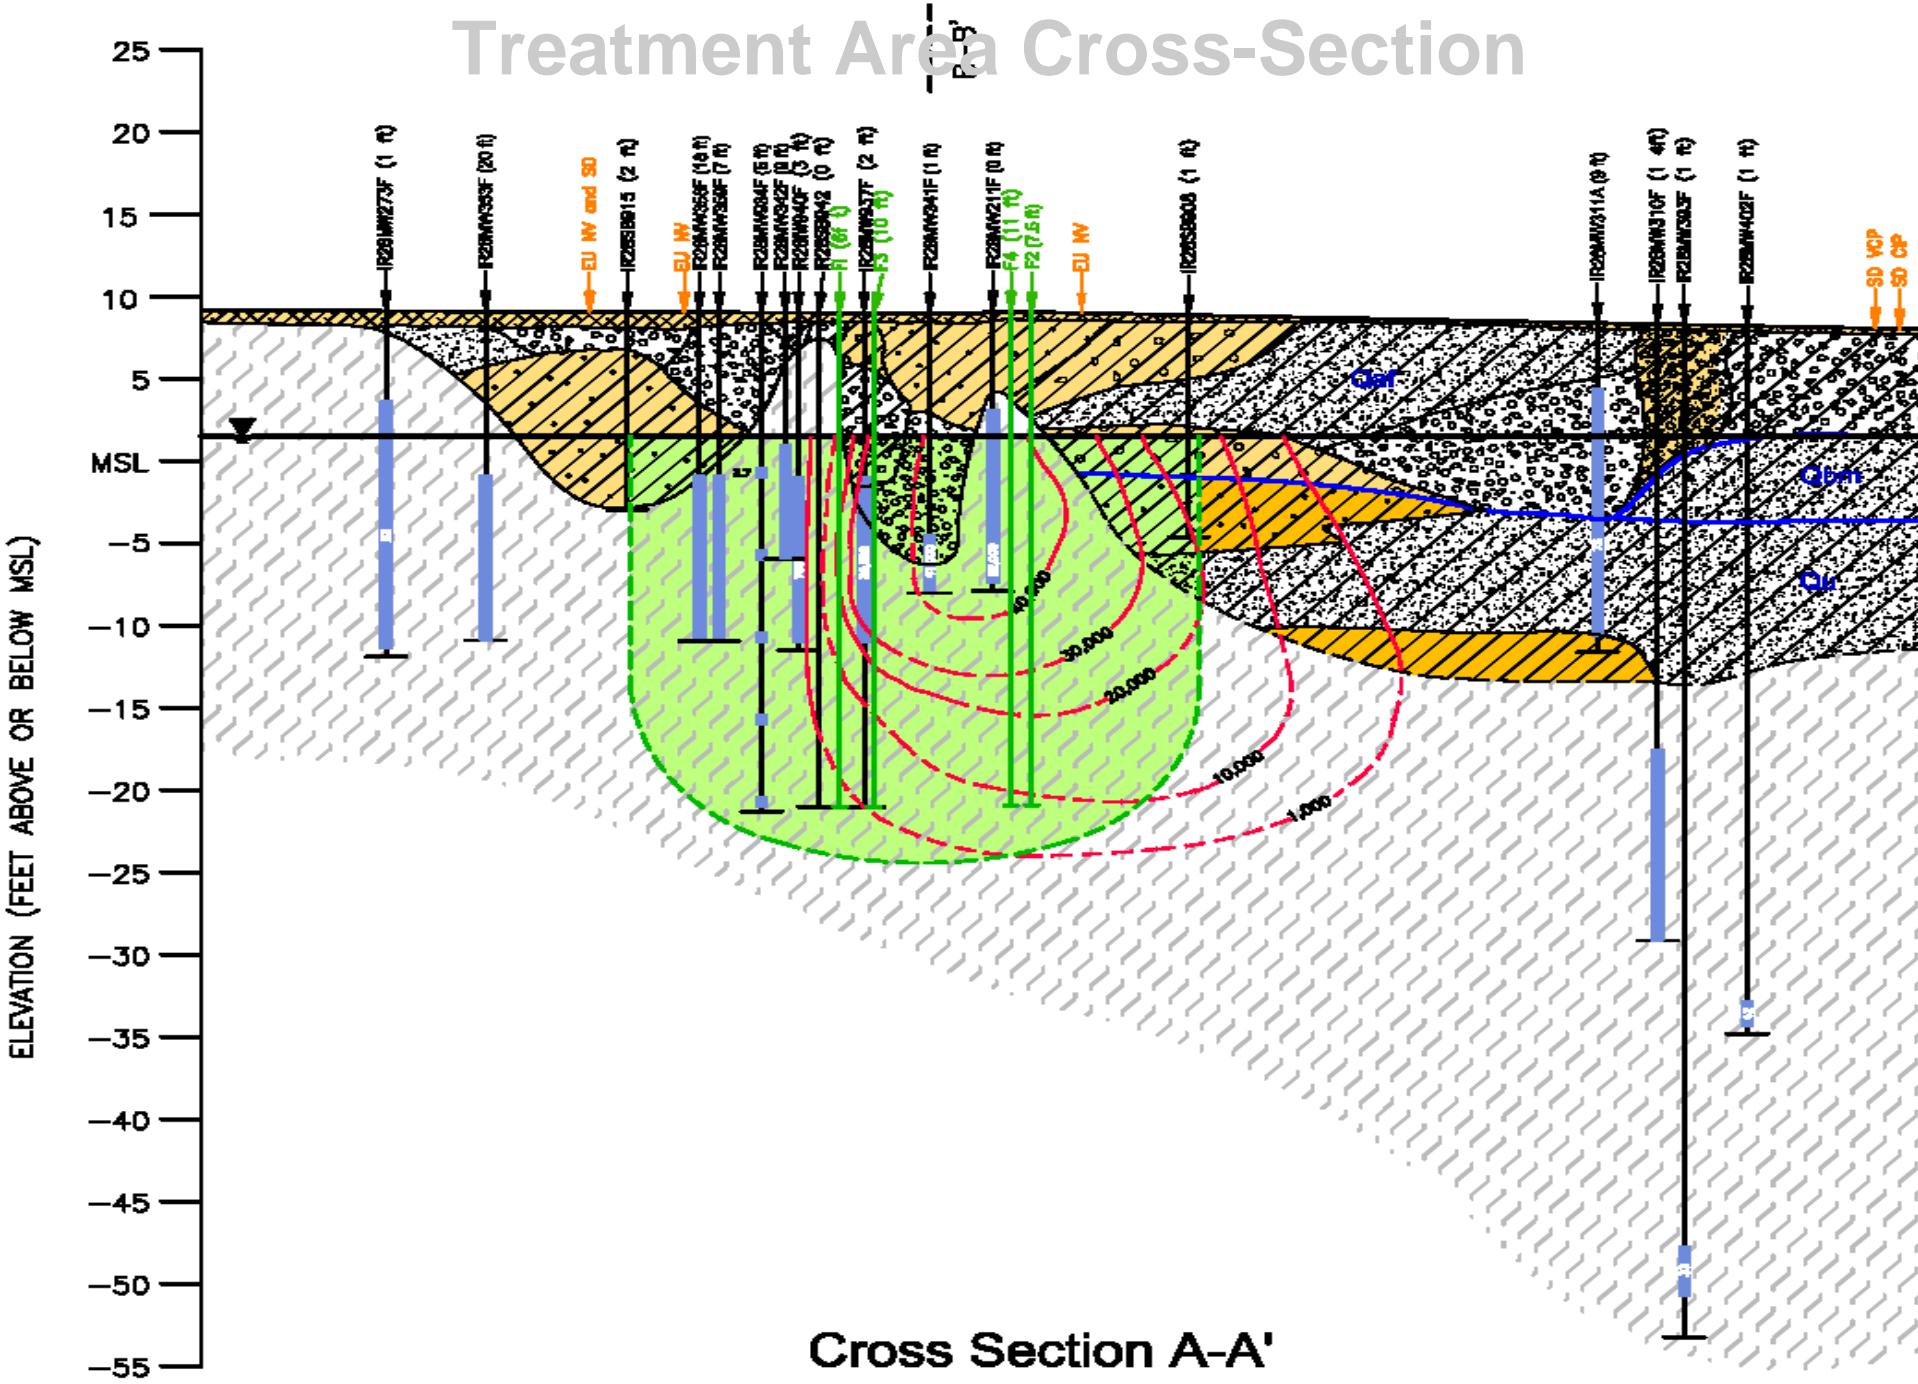

# Inside Building 272

A

# Treatment Area Cross-Section

- 
- 
- 

## Project Objectives

- Determine capability and cost-effectiveness for ZVI powder injection to reduce TCE/PCE source contamination
- Evaluate plume/DNAPL displacement concerns as a result of injection
- Assess treatment Radius of Influence at the project site

## ZVI Powder Distribution

# Conclusion Summary

- Technology is effective in significant source reduction
- Little or no evidence of contaminant displacement deeper or outside pilot test area
- Technology safely applied within and adjacent to structures. (Shallow Injections may require pulse injection)
